Civil Military Relations A Case Study Of Pakistan

This book examines the ways in which European democracies, including former communist states, are dealing with the new demands placed on their security policies since the cold war by transforming their military structures, and the effects this is having on the conceptualisation of soldiering. In the new security environment, democratic states have called upon their armed forces increasingly to fulfil unconventional tasks – partly civilian, partly humanitarian, and partly military – in most complex, multi-national missions. Not only have military structures been transformed to make them fit for these new types of deployments, but the new mission types highlight the necessity for democracies to come to terms with a new image and ethos of soldiering in defence of a transnational value community. Combining a qualitative comparison of twelve countries with an interdisciplinary methodology, this edited volume argues that the ongoing transformations of international politics make it necessary for democracies to address both internal and external factors as they shape their own civil-military relations. The issues discussed in this work are informed by Democratic Peace theory, which makes it possible to investigate relations within the state at the same time as analysing the international dimension. This approach gives the book a systematic theoretical framework which distinguishes it from the majority of existing literature on this subject. This book will be of much interest to students of civil-military relations, European politics, democratisation and post-communist transitions, and IR in general.

With historical case studies ranging from the Revolutionary War to the war in Iraq, this new book shows how and why the US military is caught between two civilian masters – the President and Congress – in responding to the challenges of warfighting, rearmament, and transformation. Charles Stevenson skilfully shows how, although the United States has never faced the danger of a military coup, the relations between civilian leaders and the military have not always been easy. Presidents have contended with military leaders who were reluctant to carry out their orders. Generals and Admirals have appealed to Congress for sympathy and support. Congressional leaders have tried to impose their own visions and strategies on the US armed forces. This triangular struggle has recurred time and again, in wartime and in efforts to reshape the military for future wars. Illustrating this dual system of civilian military control in a series of case studies, this new volume starts from the way the Continental Congress ran the Revolutionary War by committee and concludes with the George W. Bush and Donald Rumsfeld efforts to transform the US military into a modern terrorist-fighting force. This detailed coverage shows how warriors and politicians interacted at key points in US history. This book will be of great interest to all students of the US Military, government of the United States and of strategic and military studies in general.

This volume examines Lebanon’s post-2011 security dilemmas and the tenuous civil-military relations. The Syrian civil war has strained the Lebanese Armed Forces’ (LAF) cohesion and threatens its neutrality – its most valued assets in a divided society. The spill-over from the Syrian civil war and Hezbollah’s military engagement has magnified the security challenges facing the Army, making it a target. Massive foreign grants have sought to strengthen its military capability, stabilize the country and contain the Syria crisis. However, as this volume demonstrates, the real weakness of the LAF is not its lack of sophisticated armoury, but the fragile civil–military relations that compromise its fighting power, cripple its neutrality and expose it to accusations of partisanship and political bias. This testifies to both the importance of and the challenges facing multi-confessional armies in deeply divided countries.

This book investigates the relationship between international security governance, democratic civil-military relations and the relevance of strategy, as well as of absolute and relative gains, in norms formation in hybrid orders. Highlighting caveats of the legacy of Huntington’s paradigm of military professionalism, the book applies a robust methodology and data collected in four sample regions in Pakistan. It gauges the effects of international and local actors’ support in the Security Sector Reform domain and examines instances of civil-military interactions and military transition. The book also analyses determinants and strategies that can influence them to demonstrate the impact of global governance in norms diffusion, as well as of absolute and relative utility gains and incentives in normative change. The author generates a new theory pertaining to international organisations and actors as determinants of transformation processes and consequently sheds new light on the issue of global security governance, especially its impact on civil-military relations and democratisation in hybrid orders. The book will be of interest to scholars and practitioners in the field of global governance, civil-military relations, grand strategy and foreign policy as well as Asian politics, South Asian studies, peace, security and strategic studies, International Relations and political science in more general.

The interaction between military and civilian courts, the political power that legal prerogatives can provide to the armed forces, and the difficult process civilian politicians face in reforming military justice remain glaringly under-examined, despite their implications for the quality and survival of democracy. This book breaks new ground by providing a theoretically rich, global examination of the operation and reform of military courts in democratic countries. Drawing on a newly created dataset of 120 countries over more than two centuries, it presents the first comprehensive picture of the evolution of military justice across states and over time. Combined with qualitative historical case studies of Colombia, Portugal, Indonesia, Fiji, Brazil, Pakistan, and the United States, the book presents a new framework for understanding how civilian actors are able to gain or lose legal control of the armed forces. The book’s findings have important lessons for scholars and policymakers working in the fields of democracy, civil-military relations, human rights, and the rule of law.

Scholars of civil-military relations will find much to debate in Herspring’s framework, while students of civil-military and defense policy will appreciate Herspring’s brief historical tour of each countries’ post–World War II political and policy landscapes. Taking a business alliance approach, this book analyses civil-military cooperation processes in Kosovo, Kabul and the Afghan province Baghlan. It identifies the phases in these processes, highlights main factors and proposes a framework for evaluating the quality of civil-military cooperation.

The relationship between civil society and the armed forces is an essential part of any polity, democratic or otherwise, because a military force is after all a universal feature of social systems. Despite significant progress moving towards democracy among some African countries in the past decade, all too many African militaries have yet to accept core democratic principles regulating civilian authority over the military. This book explores the theory of civil-military relations and moves on to review the intrusion of the armed forces in African politics by looking first into the organization and role of the army in pre-colonial and colonial eras, before examining contemporary armies and their impact on society. Furthermore it revisits the various explanations of military takeovers in Africa and disentangles the notion of the military as the modernizing force. Whether as a revolutionary force, as a stabilizing force, or as a modernizing force, the military has often been perceived as the only organized and disciplined group with the necessary skills to uplift newly independent nations. The performance of Africa’s military
governments since independence, however, has soundly disproven this thesis. As such, this study conveys the necessity of new civil-military relations in Africa and calls not just for civilian control of the military but rather a democratic oversight of the security forces in Africa. Taking an explicitly comparative theoretical approach, Saeed Shafqat presents a comprehensive exploration of civil-military relations in Pakistan. He begins by describing the history of military hegemony in this volatile South Asian country and then examines the breakdown of military control, assessing the rise of the Pakistan People's Party and the
discusses the state of military relations with the civilian government in Sierra Leone, concentrating on the political activity of members of the
Army
This book examines military operations other than war (MOOTW) of the Indonesian military in the post-Suharto period and argues that the
twin development of democratic consolidation, marked by 'stable' civil–military relations from 2004 to 2014 under Susilo Bambang Yudhoyono's presidency, and internationalization of the military have not yet entirely de-politicized the armed forces. This book shows how peacekeeping, humanitarian assistance and disaster relief, and counter-terror missions have been reinvented by the Indonesian military (Tentara Nasional Indonesia, TNI) to adhere to its politico-institutional interests rather than to divert military attention from politics. In contrast with conventional arguments about the rationale of MOOTW in promoting military professionalism, this book provides the first critical analysis of the development of these missions and correlates them with TNI's concerted effort to preserve territorial command structure – a military network that parallels the civilian bureaucracy down to the village level. The book argues that the military in Indonesia remains domestically political amidst high intensity of international activism. A detailed investigation of civil–military relations in Indonesia, this book will be of interest to scholars in the fields of Southeast Asian studies and Asian politics, and more generally to those interested in civil–military relations, military politics, and MOOTW.

Good strategic assessment does not guarantee success in international relations, but bad strategic assessment dramatically increases the risk of disastrous failure. The most glaring example of this reality is playing out in Iraq today. But what explains why states and their leaders are sometimes so good at strategic assessment -- and why they are sometimes so bad at it? Part of the explanation has to do with a state's civil-military relations. In Shaping Strategy, Risa Brooks develops a novel theory of how states' civil-military relations affect strategic assessment during international conflicts. And her conclusions have broad practical importance: to anticipate when states are prone to strategic failure abroad, we must look at how civil-military relations affect the analysis of those strategies at home. Drawing insights from both international relations and comparative politics, Shaping Strategy shows that good strategic assessment depends on civil-military relations that encourage an easy exchange of information and a rigorous analysis of a state's own relative capabilities and strategic environment. Among the diverse case studies the book illuminates, Brooks explains why strategic assessment in Egypt was so poor under Gamal Abdel Nasser prior to the 1967 Arab-Israeli war and why it improved under Anwar Sadat. The book also offers a new perspective on the devastating failure of U.S. planning for the second Iraq war. Brooks argues that this failure, far from being unique, is an example of an assessment pathology to which states commonly succumb.

The Routledge Handbook of Civil-military Relations

This book represents the first attempt to deal with the problem of how to conceptualize the civil-military relations of communist systems within

a common intellectual framework. The opening chapters present three major constructs originally designed for analyzing civil-military

relations in the USSR: the interest group approach, the institutional congruence approach, and the participatory model. In subsequent

chapters the utility of these approaches is tested against a wide variety of communist systems, including those of Cuba, the USSR, China,

Romania, Hungary, the GDR, and Poland. In probing these issues for the first time, the authors shed considerable light on the transnational
differences and similarities among communist systems, and the dynamics of civil-military relations in all communist systems.

This Oxford Handbook is the definitive volume on the state of international security and the academic field of security studies. It provides a
tour of the most innovative and exciting news areas of research as well as major developments in established lines of inquiry. It presents a

comprehensive portrait of an exciting field, with a distinctively forward-looking theme, focusing on the question: what does it mean to think

about the future of international security? The key assumption underpinning this volume is that all scholarly claims about international

security, both normative and positive, have implications for the future. By examining international security to extract implications for the future,

the volume provides clarity about the real meaning and practical implications for those involved in this field. Yet, contributions to this volume

are not exclusively forecasts or prognostications, and the volume reflects the fact that, within the field of security studies, there are diverse

views on how to think about the future. Readers will find in this volume some of the most influential mainstream (positivist) voices in the field

of international security as well as some of the best known scholars representing various branches of critical thinking about security. The

topics covered in the Handbook range from conventional international security themes such as arms control, alliances and Great Power

politics, to "new security" issues such as global health, the roles of non-state actors, cyber-security, and the power of visual representations in

international security. The Oxford Handbooks of International Relations is a twelve-volume set of reference books offering authoritative and

innovative engagements with the principal sub-fields of International Relations. The series as a whole is under the General Editorship of

Christian Reus-Smith of the University of Queensland and Duncan Snidal of the University of Oxford, with each volume edited by a
distinguished pair of specialists in their respective fields. The series both surveys the broad terrain of International Relations scholarship and

reshapes it, pushing each sub-field in challenging new directions. Following the example of the original Reus-Smit and Snidal The Oxford

Handbook of International Relations, each volume is organized around a strong central thematic by a pair of scholars drawn from alternative

perspectives, reading its sub-field in an entirely new way, and pushing scholarship in challenging new directions.

How do civilians control the military? In the wake of September 11, the renewed presence of national security in everyday life has made this

question all the more pressing. In this book, Peter Feaver proposes an ambitious new theory that treats civil-military relations as a principal-

agent relationship, with the civilian executive monitoring the actions of military agents, the armed servants of the nation-state. Military

obedience is not automatic but depends on strategic calculations of whether civilians will catch and punish misbehavior. This model

interprets by agency theory, contradict the conventional wisdom that civil-military relations matter only if there is risk of a coup. On the

contrary, military professionalism does not by itself ensure unchallenged civilian authority. As Feaver argues, agency theory offers the best

foundation for thinking about relations between military and civilian leaders, now and in the future.

This study reviews the last 20 years of academic literature on the role of the People's Liberation Army (PLA) in Chinese elite politics. It

examines the PLA's willingness to support the continued rule of the Chinese Communist Party (CCP) and to obey directives from top party

leaders, the PLA's influence on the selection of China's top civilian leaders, and the PLA's ability to shape the domestic political environment.

Over the last two decades the discussion of these three issues has largely been shaped by five trends identified in the literature: increasing

PLA professionalism, bifurcation of civil and military elites, a reduced PLA role in political institutions, reduced emphasis on political work

within the PLA, and increased military budgets. Together, these trends are largely responsible for the markedly reduced role of the PLA in

Chinese elite politics.

This book examines how civil-military relations have been transformed in Russia, Poland, Hungary and Ukraine since the collapse of the
Soviet Union and the Warsaw Pact in 1991. It shows how these countries have worked to reform their obsolete armed forces, and bring them into line with the new economic and strategic realities of the post-Cold War world, with new bureaucratic structures in which civilians play the key policy-making roles, and with strengthened democratic political institutions which have the right to oversee the armed forces. The purpose of this thesis is to test Rebecca L. Schiff's "Theory of Concordance" against the case of Argentina. Using the case study method to determine whether this relatively neglected theory of civil-military relations accounts for the occurrence of military interventions in Argentina, this thesis also examines whether the theory provides a better tool than separation theory by which to analyze civil-military relations in Latin America. Separation theory describes the separation of civil and military institutions as it occurs in the United States and suggests that it is the ideal model for other nations to emulate. Concordance theory argues that three partner the military, the political elites, and the citizenry should aim for a cooperative relationship that may or may not involve separation, but does not require it. What is interesting about this theory is that it accounts for the U.S. model as well. The thesis concludes that in the case of Argentina, separation theory better predicts the mechanisms by which a civilian government may establish control over its formerly interventionist military. However, with modification, concordance theory may provide insights into how that control may be maintained following the transition to enduring democracy. This book analyses the normative and institutional aspects of the civil-military relationship to demonstrate that it is the politics of the relationship rather than its form that influences the likelihood of democracy and regional peace. It is useful for policymakers, academics, and general readers. This new book illustrates how democracy cannot develop or endure unless military and security forces are under the full control of democratic institutions and all the necessary safeguards, checks and balances are in place. The contributors show how contemporary European states manage the following issue: how does a society, primarily through its legitimate, democratically elected political leaders and their appointed officials, control the military, that same state institution that has been established for its protection and wields the monopoly of legitimate force? Twenty-eight case studies are selected from key countries: the Czech Republic, Germany, Georgia, France, Hungary, Ireland, Israel, Macedonia, Poland, Romania, Slovenia, Serbia and Montenegro, Switzerland and the Ukraine. The key subjects of these cases vary from corruption to military incompetence, disobedience towards civilian superiors, to unauthorized strikes and accidents. The focus is on the relationship between political, civilian and military actors while identifying problems and dangers that can emerge in those relationships to the detriment of effective and legitimate democratic control. This is essential reading for students of civil-military relations, democratization, European politics and security studies in general. "This carefully conceived collection focuses on an important, but often overlooked, aspect of civil-military relations: military effectiveness. Insightful and informative ... the chapters form a cohesive whole. Those interested in military politics, from the novice student to the seasoned expert, will find the book useful and thought provoking." -Zoltan Barany, University of Texas at AustinHow does civilian control affect military effectiveness? Can a balance be achieved between the two? In-country experts address these questions through a set of rich comparative case studies. Covering the spectrum from democracies to authoritarian regimes, they explore the nexus of control and effectiveness to reveal its importance for national security and the legitimacy of both political order and the military institution. This is the first scholarly study of the preraw phase of the French army's development into a disruptive force in national life. A chapter from the portentous 20th-century story of the soldier in politics, it has relevance to contemporary situations in other western societies. The book includes an encyclopedic bibliography. Civil-Military relations are an area of study that garners intense scrutiny. Since Samuel Huntington and Morris Janowitz first introduced their theories on civil-military relations, many scholars have debated the issue. Over the years, many alternative theories have been explored. A study of civil-military relations has been conducted on almost every nation in the world, some more than once. Of all the research available on civil-military relations, there still exists a shortfall in criteria that can be used to assist developing democracies in determining the evolution of their own civil-military relations. As nations continue to evolve, so too will their civil-military relations. This monograph attempts to bridge the shortfall in areas of civil-military relations that will help a developing nation in improving its own civil-military relations. It will also be helpful to those organizations that may find themselves in a position to assist democracies in developing their civil-military relations. In the study, four criteria are identified that apply to civil-military relations in democracies. These criteria have been applied to two case studies that show how the application of the criteria shows distinct patterns of development for civil-military relations. These criteria are the establishment of founding documents that specifically dictate civilian control over the military; the professional development of the military forces; the relationship of the civilian government and the military during times of war and peace; and the work-shirk attitude of the military. These criteria relate directly to different areas of civil-military relations where outside organizations may have the influence to provide guidance and advice to newly emerging democracies. Specifically this study may assist MNSTC-I and CSTC-A in the current fight, by helping both Iraq and Afghanistan develop a positive relationship between the government and the military. This book examines military and civilian actors in international interventions and offers a new analytical framework to apply on such interventions. While it is frequently claimed that success in international interventions hinges largely on military–civilian coherence, cooperation has proven challenging to achieve in practice. This book examines why this is the case, by analysing various approaches employed by military and civilian actors and discussing the different relationships between the intervening actors and those upon whom they have intervened. The work analyses different military concepts, such as peacekeeping and counterinsurgency, and the often-troubled relationship between the humanitarian and military intervening actors. It presents a new analytical framework to examine these relationships based on identification theory, which illuminates how the interveners represent those they have been deployed to engage, as well as their own identity and role. As such the book offers an enhanced understanding of the challenges related to civil-military cooperation in international interventions, as well as a theoretical contribution to the study of interventions, more generally. This book will be of much interest to students of international interventions, military studies, peacekeeping, security studies and International Relations. This book examines two sides of civil–military relations in developing countries. One is the place of civil-military relations
within a state’s political and economic systems; the other is the role of the military on a state’s maintenance of peace and stability. The book thus proposes that the function of soldiers is not only to defend and deter, but also to develop. The chapters provide a comprehensive analysis of civil-military relationship with comparative cases on Botswana, China, El Salvador, Honduras, Guatemala, India, Indonesia, Nicaragua, Nigeria, Pakistan, and The Arab Spring Countries of the Middle East including Bahrain, Sudan, Iraq, Jordan, Saudi Arabia, Egypt, Tunisia, Yemen and Libya. Each chapter analyzes the historical, cultural and political factors that shape the direction of the man on the white horse (military elite) and the politician. In doing so, this book reveals the potential impact of the nature of civil military relations on democratization, political and economic development, and on regional/international security. Dhirendra Vajpeyi and Glen Segell discuss and critique the current models and literature on civil-military relations. The innovative framework and careful choice of case studies, presented in a jargon-free, accessible style, makes this book attractive to scholars and students of civil military relations and development studies, as well as policymakers.

This study uses the postmodern military model to measure how public perception of the military is influenced by self-identification in Taiwan. It unveils the schism that exists between military and society, contributing to low morale and a lack of esprit de corps that puts the island’s forces at risk from an increasingly confident China.

Since the end of the Cold War almost all European countries have reformed their armed forces, focusing on downsizing, internationalization and professionalization. This paper examines how these changes in security sector governance have affected the normative model underlying the military’s relationship to democracy, using the image of the “democratic soldier”. Drawing on a comparative analysis of 12 post-socialist, traditional and consolidated democracies in Europe, the different dimensions of the national conception of soldiering are analysed based on the official norms that define a country’s military and the ways in which individual members of the armed forces see their role. Cases converge around the new idea of professional soldiering as a merging of civilian skills with military virtues in the context of the military’s new post-Cold War missions. Yet despite this convergence, research also shows that specific aspects of national traditions and context continue to influence the actual practice of soldiering in each case. The contradictions that result between these old and new visions of the role of the military and the soldier illustrate the tensions that exist between political goals and defence reform dynamics.

Putin's style of leadership has transitioned into another era but there is much still inherited from the past. In the often anarchic environment of the 1990s, the nascent Russian Federation experienced misunderstandings and mis-steps in civil-military relations. Under Boris Yeltsin it has been questioned whether the military obeyed orders from civilian authorities or merely gave lip service to those it served to protect while implementing its own policies and courses of action. Robert Brannon sets forth the circumstances under which the military instrument of Russia's power and influence could be called upon to exert force. Deriving in part from its Soviet past, the author examines how Russia's military doctrine represents more than just a road map of how to fight the nation's wars; it also specifies threats to national interests, in this case the United States, NATO and international terrorism. Against this background of politics and power, the military's influence may reveal as much about politics as it does the military.

Civil-Military Cooperation (CIMIC) is the relationship between militaries and humanitarians. Largely conducted in post-conflict environments, CIMIC has become a key characteristic of military operations in the twenty-first century. However, the field is mostly understood through stereotype rather than clear, comprehensive analysis. The range and scope of activities which fall under the wider rubric of CIMIC is huge, as are the number of differing approaches, across situations and national armed forces. This book demonstrates the wide variety of national approaches to CIMIC activities, introducing some theoretical and ethical considerations into a field that has largely been bereft of this type of debate. Containing several case studies of recent CIMIC (in the Balkans, Afghanistan, and Iraq) along with theoretical analyses, it will assist scholars, practitioners, and decision-makers become more aware of the ‘state of the art’ in this field. Civil-Military Cooperation in Post-Conflict Operations will be of much interest to all students of military studies, humanitarian operations, peace operations and security studies in general.

Civil-Military Relations in Southeast Asia reviews the historical origins, contemporary patterns, and emerging changes in civil–military relations in Southeast Asia from colonial times until today. It analyzes what types of military organizations emerged in the late colonial period and the impact of colonial legacies and the Japanese occupation in World War II on the formation of national armies and their role in processes of achieving independence. It analyzes the long term trajectories and recent changes of professional, revolutionary, praetorian and neo-patrimonial civil–military relations in the region. Finally, it analyzes military roles in state- and nation-building; political domination; revolutions and regime transitions; and military entrepreneurship. The armed forces are central actors in most societies and are involved in many different roles. Amongst other activities, they engage in peace operations, support the police in fighting crime, support civilian authorities in dealing with natural disasters, and fight against terrorists and in internal conflicts. The existing literature on this subject is limited in its discussion of war-fighting and thus does not do justice to this variety of roles. The Routledge Handbook of Civil-Military Relations offers an up-to-date comparative analysis which identifies three essential components in civil-military relations: (1) democratic civilian control; (2) operational effectiveness; and (3) the efficiency of the security institutions. Amalgamating ideas from key thinkers in the field, the book is organized into three main parts: yPart I: Development of the Field of Study; yPart II: Civil-Military Relations in Non-Democratic or Namilly Democratic Countries; yPart III: Civil-Military Relations in Democratic and Democratizing States: Issues and Institutions.

Dale R. Herspring considers the factors that allow some civilian and military organizations to operate more productively in a political context than others, bringing into comparative study for the first time the military organizations of the U.S., Russia, Germany, and Canada. Refuting the work of scholars such as Samuel P. Huntington and Michael C. Desch, Civil-Military Relations and Shared Responsibility approaches civil-military relations from a new angle, military culture, arguing that the optimal form of civil-military relations is one of shared responsibility between the two groups. Herspring outlines eight factors that contribute to conditions that promote and support shared responsibility among civilian officials and the military, including such prerequisites as civilian leaders not interfering in the military’s promotion process and civilian respect for military symbols and traditions. He uses these indicators in his comparative treatment of the U.S., Russian, German, and Canadian militaries. Civilian authorities are always in charge and the decision on how to treat the military is a civilian decision. However, Herspring argues, failure by civilians to respect military culture will antagonize senior military officials, who will feel less free to express their views, thus depriving senior civilian officers, most of whom have no military experience, of the expert advice of those most capable of assessing the far-reaching forms of violence. This issue of civilian respect for military culture and operations plays out in Herspring's country case studies. Scholars of civil-military relations will find much to debate in Herspring's framework, while students of civil-military and defense policy will appreciate Herspring's brief historical tour of each countries' post–World War II political and policy landscapes.
Looking at how armies supportive of democracy are built, this title argues that the military is the important institution that states maintain, for without military elites who support democratic governance, democracy cannot be consolidated. It demonstrates that building democratic armies is the quintessential task of democratizing regimes.

This new book addresses three key issues: What has changed in Chinese civil-military relations? What can account for changes? And what are the implications for Chinese security policy and strategic behaviour? It tackles these questions by sharply assessing civil-military dynamics in elite politics; such dynamics in national security and arms control policy; relations between commanders and political commissars; relations between the PLA and society; civil-military dynamics regarding defence economics and logistics; and such dynamics regarding dual-use technologies and defence industry. These analyses build into the central theme that the emphasis of Chinese civil-military relations is shifting from politics to military tasks. This is an extremely important new development by a nation many predict to become a super power in the twenty-first century. This is therefore essential reading for all students and scholars of strategic and security studies, Chinese studies and international relations.
