"The 'Arabick' Interest of the Natural Philosophers in Seventeenth-Century England" deals with the remarkably widespread interest in Arabic in seventeenth-century England among Biblical scholars and theologians, natural philosophers and Fellows of the Royal Society, and others. It led to the institutionalisation of Arabic studies at Oxford and Cambridge Universities where Arabic chairs were set up, and immense manuscript collections were established and utilised. Fourteen historians examine the extent and sources of this Arabic interest in areas ranging from religion, astronomy, mathematics, medicine, philosophy, philology, and alchemy to botany. Arabic is shown to have been a significant component of the rise of Protestant intellectual tradition and the evolution of secular scholarship at universities.

Includes index and appendices.

A wide-ranging edited collection that interrogates colonial expansion, and the mismatch between intention, perception and hype, and the actual realities.

This collection of essays examines English language learning in formal education contexts from pre-school to lower secondary level. Focused on an in-service teacher education project that aimed to enhance the teaching of English in a group of schools, it takes into account the perspectives of multiple stakeholders – heads of school, teachers, parents and children. Its novelty lies in the variety of themes it covers,

such as the account of a vertical implementation of a Content and Language Integrated Learning (CLIL) project at three school levels, teachers' attitudes to using picturebooks in L2 settings, cultural differences in the presentation of content in textbooks, and the role of the native language assistant.

"English for Young Learners" makes a valid contribution to research on a matter of crucial importance in Italian education in the 21st century, the improvement of the teaching and learning of English. It will be of interest to student teachers, educators, practitioners and researchers.

The 15 papers in this volume, delivered to an international conference held at the Katholieke Universiteit Leuven in the Fall of 2001, offer a systematic investigation into Polybius's many critiques and attempt to assess their potentially distortive effects.

"La Geografia semplice semplice: piccolo manuale" è un libro di geografia di base per bambini della scuola primaria dagli 8 agli 11 anni di età.
