Core Mathematics syllabus in three textbooks, one for  
each of the three Senior Secondary school years.

Question: What do you do when the kitchen wall  
collapses into the vat of beans being cooked for a horde  
of hungry schoolboys? Answer: You serve it up anyway!  
Why let a few lumps of clay and the odd metal screw  
spoil a decent meal? When Bunmi Asaolu arrived at the  
grand gates of St. John/Mary's Unity Secondary School  
(SAJOMACO) as a first-year student, you'd be forgiven  
for assuming he was swapping life on the serene  
university campus he grew up on for another of equal  
civility. Wrong! Behind the gates of SAJOMACO lay a  
world of contradictions – unspoken but strict hierarchical  
codes juxtaposed with utter chaos. Asaolu presents a  
wry, satirical and at once serious look at a Nigerian  
public boarding school in the 1990s through the eyes of  
a sheltered child navigating its brutal corridors. In  
Surviving SAJOMACO, Asaolu's experiences and those  
of his contemporaries are laid bare, giving the reader a  
raw and at times jarring insight into the incongruencies of  
school life, whilst subtly tracking the story of Nigeria  
itself.

When Jide Ejimofor decided to start keeping a diary, it was in an attempt to begin living the examined life. What he didnt anticipate was meeting the brilliant and enigmatic Nmadinobi Amankwe and how she would disrupt his sedate existence, erode previous certainties, and transform the ongoing motifs of his life.

This second edition for Cambridge O Level Commerce syllabus (7100) is thoroughly updated for first examination from 2018. Written by an experienced author in an engaging and accessible style this Coursebook provides comprehensive coverage of the syllabus and contains lots of activities and practice questions to help students apply commercial theory, with up-to-date, real-life examples.

The monograph "Explicit Biology: A Revision Course" for UTME, POST-UTME and other related examinations written by O.J. Olaoye is a complementary text to the various textbooks that have been written in the subject area. The book has five sections and twenty six chapters on all the biology topics. This book has become timely in view of the poor results that are being witnessed in the UTME examination especially in the sciences and mathematics, biology inclusive. These majorly are due to poor or inadequate access to good study materials. Each chapter has annotated topics

followed by copious specimen questions on some past UTME and POST -UTME examination, for practice and emphasis. The topics in each chapter are adequately treated and with clarity. The illustrations are simple but effective. The author has done a lot of work and put in efforts to come out with a very readable and useful text. It is highly recommended to all the students aspiring to undertake the UTME and POST-UTME examination, in order to improve highly their chances of success.

The impact of air pollution on human health is currently of international concern. A comprehensive review of the subject is given in this volume, which complements the previous title covering air quality management. Dealing with the common gaseous and particulate air pollutants, including chemical carcinogens, it reviews the epidemiological and exposure chamber study research as well as considering mechanistic studies in the case of particulate matter. Air Pollution and Health also addresses the practical issue of setting standards for human exposure to air pollution by including the philosophy of standard setting and a review of currently available standards, along with a description of the setting of USEPA revised

standards for ozone and particulate matter. Current knowledge of indoor air pollution is also discussed. As with all other books in the series, this volume will be of interest to the general public as well as being an important reference source for all those involved in the field, be it as student, industrialist, government agent, or health professional.

Suitable for all examination specifications for students over 16, this friendly and reliable guide leads students through examples of each problem. New York Times bestselling author Lauren Dane welcomes you back to Diablo Lake, Tennessee: a town founded by witches, governed by werewolves and brimming full of secrets It's autumn in Diablo Lake and the town is buzzing with preparations for Halloween, Samhain, Collins Hill Days, and the wedding of the newly elected mayor and her wolf shifter fiancé. Ruby Thorne can't think of a better time of year to come back for good and open the health clinic she's been planning for the last six years. Her connection to the town and its veins of magic have snapped back into place, flooding her with a power eager to jump to her call. She has a sense of rightness. This witch is exactly where she's supposed to be. So it's not much of a surprise that he comes back into her path just like he was meant to... Damon Dooley has spent the last few years learning how to run the pack at his older brother's right hand. There's been upheaval. Outrage.

Violence. Old rules have created a silence so crushing it's collapsed the fabric of not just the wolf shifters, but the town as a whole. And yet, Ruby has returned. Man and wolf agree she needs to be in their life regularly, and before long, things move from serious to something magically deeper. Bound to one another heart and soul, both committed to what's best for Diablo Lake, Ruby backs Damon as he pushes for much-needed change. But when something falls into Ruby's lap and she learns the whole, terrible truth, secrets need to be spilled. How—and by whom—becomes the only question.

In a follow-up to his ground-breaking "Africa Betrayed," George Ayittey takes up the plight of Africa at the end of the twentieth century. Former UN Secretary General Boutros-Boutros Ghali once said that Africa was in danger of becoming the lost continent and, on this point, Ayittey thoroughly agrees. As he begins to see countries like Nigeria go over the edge of economic and social disaster, Ayittey uses his formidable powers of analysis to look at the political economy of Africa, the incursion of foreign powers and the relationship of Africa to the world market. He contrasts the indigenous systems of government that existed in Africa before the arrival of Europeans with the colonial and post-colonial systems that were forced on the country and the effect these systems have had on Africa's inability to move forward.

Ayittey's view is dark and, as always, his stinging conclusions will infuriate some and invigorate others. Certain to create controversy, "Africa in Chaos" is a must-read for fans of Ayittey's earlier work as well as anyone interested in the world economic scene today. "

The power of electrochemical measurements in respect of thermodynamics, kinetics and analysis is widely recognised but the subject can be unpredictable to the novice even if they have a strong physical and chemical background, especially if they wish to pursue quantitative measurements. Accordingly, some significant experiments are perhaps wisely never attempted while the literature is sadly replete with flawed attempts at rigorous voltammetry. This textbook considers how to implement designing, explaining and interpreting experiments centered on various forms of voltammetry (cyclic, microelectrode, hydrodynamic, etc.). The reader is assumed to have knowledge of physical chemistry equivalent to Master's level but no exposure to electrochemistry in general, or voltammetry in particular. While the book is designed to stand alone, references to important research papers are given to provide an introductory entry into the literature. The third edition contains new material relating to electron transfer theory, experimental requirements, scanning electrochemical microscopy, adsorption, electroanalysis and nanoelectrochemistry.

In recent years, textbooks have been widely criticized for low standards, lack of imaginativeness, and insensitivity to racial and gender issues. Increasingly, they are cited as another "weak link" in American public education.

This book goes beyond the headlines to examine how textbooks are produced, how they are selected, and what pressures are placed on textbook authors and publishers. The book focuses on the relationship of the textbook to the educational system and includes important issues such as the politics of textbook policy, the determinants of textbook content, the role of textbooks in educational reform, and the process of selection at the state level. The authors offer current research on textbook policy including perspectives from those directly involved with textbooks--from several thoughtful analyses by textbook editors and publishers to the views of California's Superintendent of Public Instruction.

'...Ayttey's bitter reading is an appropriate first therapy to the malaise American policies have helped to breed.' Wall Street Journal 'Ayttey is unpredictable - and provocative. I was prepared to hate Africa Betrayed, but found myself engrossed.' Village Voice Africans are angry. Thirty years of independence have brought nothing but economic misery, famine, senseless civil wars, wanton destruction, flagrant violations of human rights, and brutal repression. At independence from colonial rule, Africans had hoped for liberty, prosperity, and a new beginning. They have been cruelly disappointed. Ayttey writes devastatingly on the horrors of black neocolonialism, arguing that it is just not good enough for commentators always to blame external factors for Africa's misery. Ayttey sees a second

liberation struggle building up throughout the continent - one that will sweep away the kleptocracy and rediscover the African traditions that have endured throughout the horrors of both white colonialism and black neocolonialism.

The Fundamentals of Physics is a compact text that includes basic topics of classical physics that a student should be familiar with in order to be truly educated in science. The text's clear and concise presentation will help a student understand the science of physics and round out his or her science foundation. The first chapter contains a historical perspective. This short history of science will firmly put the information in the text on a firm footing. A quick reading of the history will make the rest of the book easier to understand and increase the ability to remember material. Essential scientific ideas are presented in this text that fit together in such a way as to accept "new" information effortlessly and assimilate the "old" with the "new." The general plan of the text is to explain simple ideas and then incorporate them into more complex ideas. Explanatory annotations are included to ensure a student's ease of reading. General safety rules at the beginning of the text should be reviewed, even if a laboratory is not part of the course. The book includes topics that lend themselves to demonstration of basic principles of physics. Students should be encouraged to participate in demonstrations to acquire some "hands on" experience. This will allow students to grasp principles easier. The inclusion of a survey of the natural sciences will allow a student to be aware of the relationship of one science to another. An

explanation of how the basic units of measurement were arrived at is essential for a thorough understanding of mathematical concepts. Galileo's law of falling bodies, Isaac Newton's laws of motion and a short explanation of Einstein's concepts of relativity are simply presented. Atomic theory and the states of matter are clearly presented. The beginner should have no difficulty. The properties of sound and light are presented and related to everyday activities. Electricity, electronics and magnetism are included because of their relevance to the modern workplace. Understandable and practical examples are given. Radioactivity is covered because of its importance in the modern world.

"Hausa students and Hausaphiles now have an English-Hausa dictionary that is readily available, attractively produced and quite attractively priced, and more comprehensive than any English-based dictionary for an African language...A magnificent accomplishment that promises to serve a wide variety of purposes. It establishes both precedent and an excellent model that one hopes will be followed for other less commonly taught languages." -William R. Leben, *Modern Language Journal*

This is a modern comprehensive dictionary designed specifically for English-speaking users who wish to acquire communicative fluency in Hausa, West Africa's most important and most widely spoken language. The dictionary contains a broad selection of words that the average person is likely to need in speaking and writing Hausa for everyday use. Included are common technical terms drawn from a range of fields, as well as generally accepted borrowings from

English and French. The entries are divided into meaning groups and grammatical categories, marked clearly by semantic and usage indicators to help the user distinguish between the various meanings. Numerous phrases, sentences, and common idiomatic expressions illustrate conversational usage and provide culturally informative contexts. The easy to read typography marks lexical and grammatical distinctions of tone and vowel length for every Hausa word in the dictionary. The introduction provides concise information on various points of Hausa grammar. Useful appendixes include pronoun paradigms, pronunciation guides to Hausa place names and personal names, an index of Nigerian and international organizations, and a description of the currencies of Nigeria and Niger. An English-Hausa Dictionary will be an invaluable guide for students, research scholars, translators, and people with educational business, or governmental ties in West Africa who are interested in learning the language and culture of one of that area's most dynamic societies. It will be equally useful to non-Hausa speaking Africans who want to learn Hausa. In general, the innovative design features of this book will set a new standard for pedagogically oriented reference works of African languages. "A valuable resource for scholars and students of linguistic and African languages and literature...It is highly recommended for use in academic and research libraries. Newman and her editorial staff deserve to be congratulated." -Felix Eme Unaeze, American Reference Books Annual

In Africa Unchained , George Ayittey takes a controversial

look at Africa's future and makes a number of daring suggestions. Looking at how Africa can modernize, build, and improve their indigenous institutions which have been castigated by African leaders as 'backward and primitive', Ayittey argues that Africa should build and expand upon these traditions of free markets and free trade. Asking why the poorest Africans haven't been able to prosper in the Twenty-first-century, Ayittey makes the answer obvious: their economic freedom was snatched from them. War and conflict replaced peace and the infrastructure crumbled. In a book that will be pondered over and argued about as much as his previous volumes, Ayittey looks at the possibilities for indigenous structures to revive a troubled continent.

This well-established series, the most popular in Nigeria, has been fully revised to reflect recent developments in mathematics education at junior secondary level and the views of the many users of the books. It has especially been revised to fully cover the requirements of the new NERDC Universal Basic Education Curriculum.

Fifteen years ago, Mama said, starting her story, I came to Lagos from Ghana. I came to Nigeria because I was considered an alien in that country. The government of Ghana passed a law asking all aliens without resident permits to regularise their stay in the country'. This story of migration, identities and lives undermined by cynical and xenophobic politics pushed to its logical and terrible conclusion pertains to the Ghanaian orders of 'alien compliance' issued in

1970-1971, which determined to force all non-ethnic Ghanaians, so called illegal immigrants, to return to their - so stipulated - `home'. The novel thus touches on concerns of deeper relevance to the politics of race and migration of the twenty first century.
