In 1998, the United States Department of Justice and state antitrust agencies charged that Microsoft was monopolizing the market for personal computer operating systems. More than ten years later, the case is still the defining antitrust litigation of our era. William H. Page and John E. Lopatka's *The Microsoft Case* contributes to the debate over the future of antitrust policy by examining the implications of the litigation from the perspective of consumer welfare. The authors trace the development of the case from its conceptual origins through the trial and the key decisions on both liability and remedies. They argue that, at critical points, the legal system failed consumers by overrating government's ability to influence outcomes in a dynamic market. This ambitious book is essential reading for business, law, and economics scholars as well as anyone else interested in the ways that technology, economics, and antitrust law have interacted in the digital age. "This book will become the gold standard for analysis of the monopolization cases against Microsoft. . . . No serious student of law or economic policy should go without reading it."—Thomas C. Arthur, Emory University

A practice submitting 50 claims a day at an average reimbursement rate of \$200 per claim should bring in \$10,000 in daily revenue. In this transnational account of black protest, Nicholas Grant examines how African Americans engaged with, supported, and were inspired by the South African anti-apartheid movement. Bringing black activism into conversation with the foreign policy of both the U.S. and South African governments, this study questions the dominant perception that U.S.-centered anticommunism decimated black international activism. Instead, by tracing the considerable amount of time, money, and effort the state invested into responding to black international criticism, Grant outlines the extent to which the U.S. and South African governments were forced to reshape and occasionally reconsider their racial policies in the Cold War world. This study shows how African Americans and black South Africans navigated transnationally organized state repression in ways that challenged white supremacy on both sides of the Atlantic. The political and cultural ties that they forged

during the 1940s and 1950s are testament to the insistence of black activists in both countries that the struggle against apartheid and Jim Crow were intimately interconnected.
