Mild-mannered and law-abiding, Chris Norgren, curator of Renaissance and Baroque art at the Seattle Art Museum, is an unlikely undercover investigator, but when a priceless Rubens portrait is discovered in a shipment of “authentic reproductions” in a local warehouse, Chris is pressed into service to find out how it got there. The quest leads him to the medieval city of Bologna, one of his favorite places, but all too soon what might have been a welcome Italian interlude turns into a bizarre journey into shady art world doings and murderous secrets . . .

Populism is on the rise around the world. Since 2016, with the US presidential election and the Brexit debate in the UK, populism has taken a central place in global discussions on democracy. This book aims to correct the oversight that, although religion has played a key role in populism in many countries, it has been curiously neglected in recent academic debates. The authors use case studies from around the world to provide global insights into this issue. The first part of the book focuses on the West, with authors exploring the important role of Anglican voters in the Brexit referendum; rural and pre-millennialist American support for Donald Trump; and the rise of political rhetoric on Muslims in Germany, Switzerland, and Austria. The book then moves beyond the West to consider leaders and political parties in Turkey, Macedonia, Greece, Kyrgyzstan, and Kazakhstan. The authors consider varied populist types, from more established 'ruling populists' to young upstart movements. This wide-ranging volume redefines the concept of populism as a political style that sets a 'sacred people' apart from its enemies, providing a timely yet grounded account that will stimulate further research and public debate. It was originally published as a special issue of the journal *Religion, State & Society*. Provides information on how to upgrade, maintain, and troubleshoot the hardware of laptop computers, discussing the differences among them as well as their various configuration options.

Offers test preparation questions, troubleshooting flowcharts, and sample reports.

This book by two leading experts takes a fresh look at the nature of television, starting from an audience perspective. It draws on over twenty years of research about the audience in the United States and Britain and about the many ways in which television is funded and organized around the world. The overall picture which emerges is of: a medium which is watched for several hours a day but usually at only a low level of involvement; an audience which views mainly for relaxation but which actively chooses favourite programmes; a flowering of new channels but with no fundamental change in what or how people watch; programmes costing millions to produce but only a few pennies to view; a wide range of programme types apparently similar to the range of print media but with nothing like the same degree of audience 'segmentation'; a global communication medium of dazzling scale, speed, and impact but which is slow at conveying complex information and perhaps less powerful than generally assumed. The book is packed with information and insights yet is highly readable. It is unique in relating so many of the issues raised by television to how we watch it. There is also a highly regarded appendix on advertising, as well as technical notes, a glossary, and references for further reading.

The Pulitzer Prize–winning historian talks with some of twentieth century’s most iconic musicians—“Riveting . . . Just about every interview has a revelation” (San Francisco Chronicle). Through the second half of the twentieth century, Studs Terkel hosted the legendary radio show “The Wax Museum,” presenting Chicago’s music fans with his inimitable take on music of all kinds, from classical, opera, and jazz to gospel, blues, folk, and rock. Featuring more than forty of Terkel’s conversations with some of the greatest musicians of the past century, *And They All Sang* is “a tribute to music’s universality and power” (Philadelphia Inquirer). Included here are fascinating conversations with Louis Armstrong, Leonard Bernstein, Big Bill Broonzy, Bob Dylan, Dizzy Gillespie, Mahalia Jackson, Janis Joplin, Rosa Raisa, Pete Seeger, and many others. As the esteemed music critic Anthony DeCurtis wrote in the Chicago Tribune, “the terms ‘interview’ or ‘oral history’ don’t begin to do justice to what Terkel achieves in these conversations, which are at once wildly ambitious and as casual as can be.” Whether discussing Enrico Caruso’s nervousness on stage with opera diva Edith Mason or the Beatles’ 1966 encounter in London with revered Indian sitar player Ravi Shankar, “Terkel’s singular gift for bringing his subjects to life in their own words should strike a chord with any music fan old enough to have replaced a worn-out record needle” (The New York Times). “Whether diva or dustbowl balladeer, Studs treats them all alike, with deep knowledge and an intimate, conversational approach . . . as this often remarkable book shows, Studs Terkel has remained mesmerized by great music throughout his life.” —The Guardian “[Terkel’s] expertise is evident on every page, whether debating the harmonic structure of the spirituals or discerning the subtleties of Keith Jarrett’s piano technique . . . As ever, he is the most skillful of interviewers.” —The Independent “What makes *And They All Sang* a rousing success isn’t just Terkel’s phenomenal range and broad knowledge, it’s his passionate love of the music and his deep humanity.” —San Francisco Chronicle

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces.

Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R^3 as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.

The book's visuals and professional-level tutorials are by some of the world's top motion graphics designers. Each contributor applies his or her personal visual style to the book, giving the reader an array of expert approaches to draw upon. The book focuses on real-world extended techniques rather than single-feature how-to's.
