

Substance Abuse Role Play Scenarios

This skill-building primer provides a framework for understanding substance abuse and teaches the basic concepts and skills necessary for effective counseling of clients with substance use disorders. In Part I, Dr. Yalisove discusses counselor roles and the fundamental principles of substance abuse counseling. He then provides a synopsis of several key substance abuse theories as well as his own Building Session Goals and Strategies method and the Eight Stage Process of Counseling approach, all of which are practical, compatible means for learning and mastering clinical counseling skills. Part II illustrates applications of the tenets of these approaches in clinical situations—from beginning counseling sessions through termination—using experiential exercises, role-plays, and clinical scenario examples. Chapters on group work, counseling clients with dual disorders, family counseling, and working with diverse client populations follow. A helpful chapter on creating client treatment plans and writing clinical reports rounds out the book. Dr. Yalisove's clear and concise writing style and his practical approach to developing critical thinking and counseling skills makes this an ideal supplemental text for addictions courses.--Amazon.com.

Mindfulness-Based Substance Abuse Treatment for Adolescents is a group-based curriculum incorporating mindfulness, self-awareness, and substance-abuse treatment strategies for use with adolescents dealing with substance use. The evidence-based, how-to format provides a curriculum for professionals to implement either partially, by picking and choosing sections that seem relevant, or in full over a number of weeks. Each session comes equipped with clear session agendas, example scripts and talking points, what-if scenarios that address common forms of resistance, and optional handouts for each session. Sections cover the major principles of working with adolescents—relationship building, working with resistance, and more—along with a full curriculum. The book is a natural fit for psychotherapists, but addiction counselors, school counselors, researchers, mentors, and even teachers will find that Mindfulness-Based Substance Abuse Treatment for Adolescents changes the way they work with young people.

Research has shown that, for many teens, trauma can lead to addiction. Now, for the first time ever, two mental health experts offer a powerful, integrative program to effectively treat teens with these co-occurring issues. Trauma and addiction often present side by side. However, up until now, clinicians have lacked the tools needed to treat these two issues together. Based in cognitive behavioral therapy (CBT) and mindfulness—two proven-effective therapies for addiction and mental health issues—Treating Co-occurring Adolescent PTSD and Addiction is essential for anyone working with adolescents with addiction and post-traumatic stress disorder (PTSD). Developed and researched explicitly for dual diagnosis adolescent clients, this book provides a range of mindfulness practices and tools to help your client be present in what he or she is experiencing—instead of slipping into a pattern of avoidance. In addition, the cognitive behavioral strategies can help adolescents who are at risk of recurrent trauma, and who could therefore benefit from practicing coping strategies to assist them in their current daily situations. This is a must-have resource for any mental health provider treating adolescents with dual diagnosis of PTSD and addiction.

Here is a comprehensive review of adolescent substance abuse issues and an expansive, empirically based curriculum for school-based programs to teach adolescents about the dangers of drugs and alcohol. The abuse of alcohol and other drugs among young people is a problem of alarming scope and gravity. Adolescent Substance Abuse explores the multiple forces which impact adolescents and can push them toward drug and alcohol abuse. Adolescent Substance Abuse proposes means by which to effect macro-level change in societal norms and values regarding substance abuse. The authors describes in detail an effective means of teaching adolescents about drugs and alcohol using an empirically based teaching method called Teams-Games-Tournaments (TGT). TGT was developed through extensive research on games used as teaching devices. It uses small groups as classroom work units and capitalizes on peer influence by using peers as teachers and supporters. The book explains an effective curriculum which utilizes the TGT approach and provides a program for parents. The curriculum is unique in that it is anchored in empirical data and delivered via adolescent peer groups. Adolescent Substance Abuse addresses other issues pertinent to the reduction of adolescent substance abuse by exploring subsystems of change, including school and peer group environments, home and family, the media, community movements, and business and industry. The book is a great source of innovative ideas for beginning and expert counselors, social workers, mental health professionals, school psychologists, and others who want to prevent adolescent abuse of drugs and alcohol.

The use of techniques and interventions for play therapy during the supervision process for graduate and post-graduate counselors provides a host of benefits for the counseling student, post-graduate intern, and supervisor. The counselor in training is able to experientially integrate theory with practice through the use of different modalities that provide reflection and insight into their work with clients. Additionally, the use of techniques and interventions for play therapy allows a secure and strong supervisory relationship, which allows the counselor in training to explore personal and professional goals; verbalize and conceptualize client issues, goals, and effective interventions; and develop counselor-client relationships that allow the client to progress during the therapeutic process. However, play therapy techniques and interventions are not often incorporated into the supervision process unless the clinician is a registered play therapist being supervised by a registered play therapist supervisor.

With the growth of threats and violence in higher education settings, college campuses are increasingly expected to have systems in place to identify potentially aggressive individuals and intervene to ensure the safety of the campus population. This book will be useful for student affairs professionals as well as college counselors, psychologists, social workers interested in the practical management of aggression and violence on a college campus. It will also be a valuable resource for those involved in creating and running behavioral intervention teams and threat/risk assessment teams. Ten case studies from both the community and residential college settings provide a comprehensive overview of campus violence and how to intervene to prevent it. Pertinent background information is discussed as an introduction to these narratives, such as the fundamentals of aggression and violence on campuses; how these behaviors can impact students, faculty, and staff; and what can be learned from past campus violence. Along with discussion questions and a review of ways to approach each situation, experts in higher education, forensic risk assessment, law enforcement, and legal issues weigh in on each case study. Their perspectives offer a context and broad base of opinions and ideas on how each case could be handled. Additional examples for further training of the college counselor are given through a detailed look at almost 100 incidents of violence, including thwarted attacks, rampage shootings, and hostage situations.

Youth crime and youth violence blights our communities and shapes the lives of many, whether they are victims, perpetrators or family members. This book examines the application of psychological thinking and practice when working with young people who display high risk behaviours across a broad range of forensic mental health settings in the UK. It provides an up-to-date account of current thinking and practice in the field and the challenges of applying effective psychological approaches within forensic settings for young people. The contributors to Young People in Forensic Mental Health Settings are drawn from a range of environments including universities, youth offending services, secure in-patient settings, young offender institutions, Community Forensic Child and Adolescent Mental Health Services (F-CAMHS), and secure children's homes. Role play and foreign language learning helps the learners to develop speaking skills within defined social contexts. Languages are always spoken within certain defined spacio-social context. The learning of French as a foreign language in Kenya takes cognizance that oral skills are important to facilitate competent communication in any given language. The Kenyan reality of learning oral French skills within a learning set-up in Kenyan secondary schools is well presented in this text. The salient challenges are also highlighted since language learning is normally not a smooth sail for the learner and for the teacher who plays a pivotal facilitation role in guiding the learner to imbibe the vital communicative skills in the language that is being taught. On the whole role play is not just a language learning activity; it is an activity that provides impetus which propels human development in its entire gamut of activities. A conspicuous hint on the importance of role play in our daily lives is also presented in this text with some examples well presented and cited in this write-up. Stephen Kraschen's Monitor Model on language acquisition and the Grounded Theory which helps to interpret social research findings have been used to analyze the data which was derived from the inquiry done in the Kenyan secondary schools. The classical importance of role play and simulation in the learning process has been well underscored in this particular text.

Despite evidence that 90% of violent crimes are committed by men, higher education professionals and researchers still understand relatively little about the process by which male students acquire the attitudes, knowledge, values and skills which serve as deterrents to perpetrating

violence against women and against other men. Men Against Violence is a peer advocacy organization at a large, public Research I institution in the South which focuses on the special and unique responsibility men have to end violence. Through participation in a wide array of service learning, community action and leadership opportunities, MAV members challenge cultural norms which link masculinity with violence. Types of violence targeted by MAV include: fighting, domestic violence, rape, vandalism, hazing, harassment, hate crimes, homicide and suicide. Utilizing a sociological, public health perspective that incorporates theories of masculinity and models of student development, this dissertation is a case study of the organization Men Against Violence. It examines the ways in which a close-knit association of men generated and sustained an organizational culture that encourages and rewards non-violence among its members, as well as begins to reframe traditional conceptions of masculinity. Subjects for this study consisted of the eight male students who comprised the 1997-1998 Executive Board of MAV. Primary research questions were: (1) What are the characteristics of an organizational culture of non-violence that is created and maintained among a close-knit group of male college students? (2) How can higher education professionals, particularly women, facilitate the process of creating such an organizational culture? Chapter 1 addresses methodological concerns in the dissertation; Chapters 2 and 3 review current literature regarding men and campus violence; Chapter 4 provides a historical narrative of the founding and development of MAV; Chapter 5 presents cultural themes which emerged during content analysis of data from ethnographic interviews and participant-observation; and Chapter 6 offers theoretical and practical implications of the study.

Includes information on self-management, decision-making, communication, goal-setting, self-reflection, cooperation. Resolves the fundamental debate between cognitivists and social constructionists concerning the metaphysics of human psychology, and offers new insights into therapy, education, and creativity.

The history of drug abuse prevention campaigns suggests limitations in producing measurable changes in behavior. In the past, there was concern over the possibility of such publicity actually encouraging interest in drug use, rather than discouraging such behavior. Although little or no scientifically sound empirical evidence has been found to support such a view, several social science textbooks still refer to this as something of which to be wary. Reviews of early research appear to indicate inadequate methods and a lack of rigor in theory testing. In recent years, however, research in communication and its uses in drug abuse prevention has become considerably more sophisticated, and communication is being used far more effectively. In this book, the editors bring together some of the most successful drug abuse prevention researchers in the country -- along with other experts in this field or in persuasive communication -- to address use and effects of both mass media and interpersonal strategies. This collection illustrates just how far the study of public influence through mass media has come, especially regarding such a vital, relevant issue as drug abuse prevention. Bringing together leading experts, this book demonstrates the unique value of brief motivational interventions for addressing adolescent alcohol and other substance use in a range of clinical contexts. It presents cutting-edge knowledge on the etiology and developmental context of adolescent addictive behaviors and reviews exemplary treatment approaches. Effective strategies are described for intervening with diverse populations, such as college students, youth in the justice system and in foster care, those with co-occurring substance abuse and psychiatric problems, LGBT youth, and Latino and American Indian adolescents. This book replaces the editors' influential earlier work, *Adolescents, Alcohol, and Substance Abuse*, with an expanded focus on practical applications. Most of the chapters are completely new.

Teens are so in tune with the critical issues their peers face--but often they don't know how to step in during a crisis. *Teen to Teen* is a comprehensive guide to peer ministry--a manual for training young people how to reach out and respond to peers who are at risk. Depression, suicide, substance abuse, teen sexuality, sexual abuse, and grief are weighty topics that are tough for teens to discuss. But this guide gives teens the tools to recognize the distress signals of peers in crisis, and it provides them with the language and skills they need to respond. The training helps young people discern when a situation warrants a referral to an appropriate adult and gives them the skills for seeking out adults who will step in. The program also benefits the teens who are being trained by increasing their ability to deal with their own issues and crises. Through step-by-step, practical information on how to intervene in critical situations, this manual will help teens make a difference in the lives of their peers.

Given the vast amount of research related to behavioral assessment, it is difficult for clinicians to keep abreast of new developments. In recent years, there have been advances in assessment, case conceptualization, treatment planning, treatment strategies for specific disorders, and considerations of new ethical and legal issues. Keeping track of advances requires monitoring diverse resources limited to specific disorders, many of which give short shrift to child assessment, overlooking developmental considerations. Much of the existing literature is either theoretical/research in focus or clinical in nature. Nowhere are the various aspects of child behavioral assessment placed in a comprehensive research/clinical context, nor is there much integration as to conceptualization and treatment planning. The Clinician's Handbook of Child Behavioral Assessment was created to fill this gap, summarizing critical information for child behavioral assessment in a single source. The Clinician's Handbook of Child Behavioral Assessment provides a single source for understanding new developments in this field, cutting across strategies, techniques, and disorders. Assessment strategies are presented in context with the research behind those strategies, along with discussions of clinical utility, and how assessment and conceptualization fit in with treatment planning. The volume is organized in three sections, beginning with general issues, followed by evaluations of specific disorders and problems, and closing with special issues. To ensure cross chapter consistency in the coverage of disorders, these chapters are formatted to contain an introduction, assessment strategies, research basis, clinical utility, conceptualization and treatment planning, a case study, and summary. Special issue coverage includes child abuse assessment, classroom assessment, behavioral neuropsychology, academic skills problems, and ethical-legal issues. Suitable for beginning and established clinicians in practice, this handbook will provide a ready reference toward effective child behavioral assessment.

Play therapy interventions are critical elements of providing responsive services within the context of comprehensive school counseling programs. However, many school counselors are not trained in the use of play therapy techniques during their graduate training programs as Play Therapy is not a required course based on standards set by the Council for Accreditation of Counseling and Related Education Programs (CACREP) (2009). Indeed, while there are over 400 school counseling programs in the U. S., there are only 11 certified play therapy training centers. Even more critically, school counselors may not know which play therapy approaches and interventions are evidenced based for specific childhood concerns (e. g., selective mutism, social skills deficits, parent deployment). Play therapy is a structured, theoretically-based approach to counseling that builds on the normal communicative and learning processes of children

as they may not have developed the complexities of language to accurately express their concerns (Carmichael, 2006; Gil, 1991; Landreth, 2002; O'Connor & Schaefer, 1983). Further, children who are most in crisis may be the ones who need play concepts integrated in counseling; yet, many school counselors are unprepared to provide these vital resources. The focus of this book is on various play techniques and the application of various play therapy theories (i. e., Child Centered Play Therapy, Solution Focused Play Therapy, Cognitive Behavioral Play Therapy) within comprehensive school counseling programs, addressing various childhood concerns, prevention and intervention. Each chapter offers vignettes, a literature review of a specific childhood concern (e.g., homelessness, separation anxiety), pragmatic interventions for the school environment, and a case study to demonstrate application of techniques.

Covers key social problems and practice-related issues The last two decades in social work have seen tremendous strides in field research, from the development of improved research designs to more accurate methods of problem measurement and outcome analysis. Drawing upon these significant advances, the two-volume handbook of Empirical Social Work Practice brings together empirically validated interventions for many of the psychosocial problems most frequently encountered by social workers in their daily practice. Unlike other books in the field that employ a theory-based approach to treatment, this handbook focuses on the best-supported methods of helping clients with particular problems irrespective of theoretical biases, offering clinicians a valuable compendium of practice guidelines for treatment. Edited and authored by recognized experts in the field, the Handbook of Empirical Social Work Practice is clearly written and organized for easy reference. Volume Two covers key social problems and practice-related issues including: * Crime, homelessness, and unemployment * Domestic violence and sexual abuse * Family conflict and preservation * Practice approaches for older clients * Empirically based supervision With information that is at once accessible and up to date, the Handbook of Empirical Social Work Practice is a vital source of guidance for today's clinical social workers and other practicing mental health professionals, as well as students. "One of the best tools to promote the values of the [social work] profession is that of empirical social work practice. 'Telling the truth' is one of these values, and discovering the truth is something that empirical research is very good at. This book presents credible reviews of contemporary empirical literature pertaining to selected behavioral, affective, and intellectual disorders, and their psychosocial assessment and treatment. That such a book is now possible is a striking affirmation of the merits of the approach to social work called empirical clinical practice." ---- from the Handbook of Empirical Social Work Practice
