In 2017, author Shanna Swan and her team of researchers completed a major study. They found that over the past four decades, sperm levels among men in Western countries have dropped by more than 50 percent. They came to this conclusion after examining 185 studies involving close to 45,000 healthy men. The result sent shockwaves around the globe—but the story didn't end there. It turns out our sexual

development is changing in broader ways, for both men and women and even other species, and that the modern world is on pace to become an infertile one. How and why could this happen? What is hijacking our fertility and our health? *Count Down* unpacks these questions, revealing what Swan and other researchers have learned about how both lifestyle and chemical exposures are affecting our fertility, sexual development—potentially including the increase in gender fluidity—and general health as a species. Engagingly explaining the science and repercussions of these worldwide threats and providing simple and practical guidelines for effectively avoiding chemical goods (from water bottles to shaving cream) both as individuals and societies, *Count Down* is at once an urgent wake-up call, an illuminating read, and a vital tool for the protection of our future.

Infertility medicine today is all about aggressive surgical, chemical and technological intervention. But making babies originally was - and is still best as - a natural process. In the UK it is estimated that approximately 1 in every 6 couples have difficulty conceiving and 1 in 80 babies is born as a result of IVF treatment. While 75% of people seeking help with their fertility try alternative treatment, few doctors are aware of how the disciplines of Western and Eastern fertility treatment can be used together to achieve the best results. The “Jason Bourne of fertility” (The New York Times Book Review) presents a personal and deeply informative account of one woman’s journey through the global fertility industry. On paper, conception may seem like a simple biological process, yet this is often hardly the case. While many would like to have children, the road toward conceiving and maintaining a pregnancy can be unexpectedly rocky and winding. Lawyer Elizabeth Katkin never imagined her quest for children would ultimately involve seven miscarriages, eight fresh IVF cycles, two frozen IVF attempts, five natural pregnancies, four IVF pregnancies, ten doctors, six countries, two potential surrogates, nine years, and roughly \$200,000. Despite her three Ivy League degrees and wealth of resources, Katkin found she was woefully undereducated when it came to understanding and confronting her own difficulties having children. After being told by four doctors she should give up, but without an explanation as to what exactly was going wrong with her body,

Katkin decided to look for answers herself. The global investigation that followed revealed that approaches to the fertility process taken in many foreign countries are vastly different than those in the US and UK. In *Conceivability*, Elizabeth Katkin, now a mother of two, exposes eye-opening information about the medical, financial, legal, scientific, emotional, and ethical issues at stake. “A well-researched, informative, and positive account of a very long journey to motherhood” (Kirkus Reviews), *Conceivability* sheds light on the often murky and baffling world of conception science. Her book is an invaluable and inspiring text that will be a boon to others navigating the deep and “choppy waters” of fertility treatment (Publishers Weekly), and her chronicle of one of the most difficult, painful, rewarding, and loving journeys a woman can take is as informative as it is poignant.

A brilliant exploration of the natural, medical, psychological, and political facets of fertility When Belle Boggs's "The Art of Waiting" was published in Orion in 2012, it went viral, leading to republication in Harper's Magazine, an interview on NPR's The Diane Rehm Show, and a spot at the intersection of "highbrow" and "brilliant" in New York magazine's "Approval Matrix." In that heartbreaking essay, Boggs eloquently recounts her realization that she might never be able to conceive. She searches the apparently fertile world around her--the emergence of thirteen-year cicadas, the birth of eaglets near her rural home, and an unusual gorilla pregnancy at a local zoo--for signs that she is not alone. Boggs also explores other aspects of fertility and infertility: the way longing for a child plays out in the classic Coen brothers film Raising Arizona; the depiction of childlessness in literature, from Macbeth to Who's Afraid of Virginia Woolf?; the financial and legal

Pregnancy—unquestionably one of the most profound, meaningful experiences of adulthood—can reduce otherwise intelligent women to, well, babies. Pregnant women are told to avoid cold cuts, sushi, alcohol, and coffee without ever being told why these are forbidden. Rules for prenatal testing are similarly unexplained. When award-winning economist Emily Oster was a mom-to-be herself, she evaluated the data behind the accepted rules of pregnancy, and discovered that most are often misguided and some are just flat-out wrong. pregnant and ones who have had recurrent losses of pregnancies. Unique among infertility guides, this volume gives roughly equal weight to male and female causes, which is important because about 40% of infertility cases are due to men's issues—and some couples need to address issues in both the prospective mother and prospective father. It covers endometriosis, fibroids, POS (Polycystic Ovarian Syndrome), tubal factor, male factor, and other possible causes. Next it looks at your treatment options. Importantly, these are not just medical interventions, but they also include lifestyle changes you alone can make, involving sleep, diet, exercise, and other forms of self-care. Among medical options, IUI (Intrauterine Insemination), IVF (In Vitro Fertilization), and various surgical procedures are covered in detail. Some couples are lucky to have a short journey to fertility. For others, the process takes years. With a gentle and sure hand, and non-judgmentally, Dr. Trolice guides you through the many decisions you need to make along the way, such as whether or not to continue treatments, whether to change practitioners or treatments, and whether it is a good idea to continue to spend money on procedures not covered by your insurance. He understands that these are emotionally weighty decisions that involve the future of your family, and he provides ample grounds for optimism and hope, empowering you as you take this journey.
